

Hi Make Engineering Team,

I'm a first-year Software Engineering student at ČVUT (FEL) here in Prague, but more importantly, I'm a builder who is obsessed with automating the boring stuff. When I read your job description calling for people who "use AI tools as a force multiplier" and "vibe-code at 2am just to test an idea," I instantly knew I had to apply for the **AI & Integrations** track.

Make's mission to empower anyone to build and automate complex workflows resonates deeply with what I do in my free time. I don't just learn frameworks; I build products to solve real problems. Right now, I'm architecting an **end-to-end automation pipeline** using Python, the Google Maps API, and LLMs to completely automate lead generation and personalized outreach.

I treat AI tools like **Cursor** and **Claude** as my daily co-pilots, which allows me to rapidly iterate and ship features for my Telegram bots and web projects (like Wuide and EstateShine) in hours instead of days. I always start by asking "why does a user need this?" before I write a single line of code.

I am applying to Make because I want to move beyond university projects and contribute real code to global SaaS systems. I want to build backend APIs, improve AI workflows, and work in an environment where "Game on!" is a core value. I am not looking for a shadowing internship; I am looking to **ship**.

Since I am already based in Prague, I would be absolutely thrilled to meet the team at the **Prague Intern Day on April 8th**.

Thank you for your time, and I look forward to the opportunity to build together.

Best regards,

Mykyta Hosalo
